New Innovative Hydraulic Hose Repair Kit

In 2017 the Turner farmers released a new innovative product to the Market. A temporary repair for hydraulic hoses. The next generation farmers saw the vital need for farmers and industry to keep moving and reduce downtime where possible. In rural areas of Australia, you can be waiting days for a new hose and losing time and money especially in peak season.

The hydraulic hose repair kit contains 1/4", 3/8", 1/2", 3/4" and 1" clamps and joining barb. The clamp can be used as a patch for lower pressure applications or as a joiner for higher pressure applications. The repair clamps are a temporary fix and a new hose should be ordered when possible.
